

PERFORMANCE REPORT

Digital Marketing Campaign

1. Introduction

This report documents the digital marketing campaign conducted for Turkish Rahat Pizza as part of a three-week internship project. Turkish Rahat Pizza is a newly opened local restaurant at Mughal Plaza, Girja Road, Rawalpindi Cantt, offering fast food items, family meal combos, and special deals. The business was selected because it is a newly opened local restaurant with no established digital presence, making it an ideal real-world client for applying digital marketing concepts from the scratch.

2. Market Research

The target audience consists of local residents aged 15–45, friend groups, and families. All of them are drawn to affordable meals, late-night dining, and deal-based offers. TikTok analytics confirmed that this audience is most active between 10pm and 1am daily, aligning with the restaurant's late-night positioning. The best platform for a local shop with limited reach was TikTok and Facebook which directly reach the targeted local residents of the nearby areas. Research also showed that short-form video and authentic content consistently outperform static promotional graphics in this market, and that combo deals drive more interest than individual menu items.

3. Competitor Analysis

Chicky Munch is the area's market leader with 1,136 TikTok followers and a top video reaching 34,100 views. Their strength lies in atmospheric ambience content and being open until 3am. Umer Pizza and Burger, located on the same road, has only 143 followers despite consistent posting, because their content is entirely deal-graphic based with low engagement. The key

insight is that TRP can compete by combining authentic content with clear deal communication, moreover making proper content reels like trendy ones would give TRP more reach, which neither competitor has fully achieved.

4. Campaign Goals & KPIs

The campaign's primary goal was brand awareness, which primarily include establishing TRP's presence on Facebook, TikTok, and WhatsApp. Measurable targets included 40–50 new followers in four weeks, 10+ likes per post, 2–3 social media orders in three weeks, and 200 people reached weekly. KPIs tracked were follower growth, post likes, weekly reach, and engagement rate.

5. Content Strategy

Content was planned across four categories: 40% authentic content which include ambience, behind-the-scenes & food prep, 30% product content i.e. signature dishes & close-ups, 20% promotional content i.e. deals, combos, and 10% engagement content such as adding captions for tagging-a-friend & polls. Posting frequency was 2–3 times daily, with the most effective window identified as 8–9pm to align with the 10pm–1am peak audience activity.

6. Campaign Execution

The campaign launched on June 13, 2026, across TikTok an existing platform with 15 followers, Facebook, and WhatsApp Channel – both of which are newly created. A WhatsApp Business catalogue was set up, and one newsletter broadcast was sent promoting weekend deals. A live paid Facebook ad with the goal "Get More Calls" as instructed by shop owner, ran for two days from June 20–22 with a Rs. 300 daily budget, spending Rs. 599.47 total across Facebook,

Instagram, and Messenger. A Facebook A/B test was also conducted, comparing two reels with different cover images to test engagement behavior.

7. Performance Results

TikTok was the strongest platform. Over ten days, the account reached 9.8K post views, 1.5K likes, 125 comments, and gained 23 net new followers. 90.1% of traffic came from TikTok's *For You* page, confirming strong organic algorithmic reach. The top-performing content was a behind-the-scenes pizza-making video (2,667 views) and a restaurant ambience reel (600 views, 40+ likes).

Facebook generated 1,958 views, 59 engagements, and 21 net new followers in its first week. The paid ad produced 1,608 views, 1,370 unique viewers, and 18 link clicks at Rs. 9.20 per click. The WhatsApp Channel reached 26 followers, with the newsletter broadcast receiving 8 shares. No confirmed orders were received through social media during this period, which is consistent with an early brand awareness phase focused on reach rather than direct conversion.

8. Optimization

The weakest-performing post was the Family Deals graphic, which received only 17 views despite using a trending audio with 6.7 million posts. The most likely cause is that multiple deal posts were published simultaneously on the same day, causing the algorithm to distribute reach across competing posts from the same account rather than pushing any single one. Future posting should space deal content across different days and times rather than publishing in bulk.

Static deal graphics with no motion or hook in the first two seconds consistently underperformed video content, and future versions should incorporate viral hooks or transitions to improve watch time, which is a key algorithmic signal on TikTok.

9. Lessons Learned & Recommendations

The most important lesson from this campaign is that authenticity outperforms polish. The content that performed best on TikTok and Facebook was raw and specific not a designed graphic unlike Instagram. Many brands default to AI-generated or templated content and lose their identity in the process. Consistency also matters more than volume; posting in bulk on one day hurts reach, while steady daily posting builds compounding momentum over time.

Going forward, Turkish Rahat Pizza should prioritize video content over static graphics, post consistently between 8–9pm daily, and cross-post TikTok reels to Facebook to maximize reach with minimal additional effort. The paid ad budget should be increased, when possible, with tighter location targeting around Girja Road specifically. The Google Maps listing confirmed live with a 5.0-star rating and 16 reviews, should be actively maintained with updated photos, newly added menu and responses to reviews, as local search visibility is a valuable and underutilized channel for restaurant businesses.
